

Laboratorio 28

Triggers

Para este laboratorio decidí aplicar un trigger simple para poder guardar en una tabla de auditorías los materiales insertados. Esto para poder tener un registro histórico de los movimientos de la tabla de materiales.

The screenshot shows a window titled "Edit" with a close button in the top right corner. Inside the window, there is a tab labeled "Details". Below the tab, there are four fields: "Trigger name" with the value "after_materiales_insert", "Table" with the value "materiales", "Time" with the value "AFTER", and "Event" with the value "INSERT". Below these fields is a large text area labeled "Definition" containing the SQL code:

```
1 INSERT INTO auditorias_materiales
VALUES(DEFAULT, New.descripcion)
```

. At the bottom of the window, there is a field labeled "Definer" with the value "root@localhost". At the very bottom of the window, there are two buttons: "Go" and "Close".
